FIRST YEAR

PAPER 101: Inorganic Chemistry 50 MARKS

PAPER 102: Organic Chemistry 50 MARKS

PAPER 103: Physical Chemistry 50 MARKS

PAPER 104: PRACTICAL (Based on Paper 101, 102, 103) 50 MARKS

SECOND YEAR

PAPER 201: Inorganic Chemistry 50 MARKS

PAPER 202: Organic Chemistry 50 MARKS

PAPER 203: Physical Chemistry 50 MARKS

PAPER 204: PRACTICAL (Based on Paper 201, 202, 203) 50 MARKS
THIRD YEAR

PAPER 301: Inorganic Chemistry 50 MARKS

PAPER 302: Organic Chemistry 50 MARKS

PAPER 303: Physical Chemistry 50 MARKS

PAPER 304: PRACTICAL (Based on Paper 301, 302, 303) 50 MARKS
B.Sc. (CHEMISTRY)  
FIRST YEAR DETAILED SYALLBUS  
PAPER 101  
Inorganic Chemistry  
60 hrs (2 hrs/week)  

Unit I  

I. Atomic Structure  
6 hrs  
Idea of de-Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrödinger wave equation, significance of $\Psi$ and $\Psi^2$, quantum numbers, radial and angular wave functions and probability distribution curves, shapes of s,p,d, orbitals. Aufbau and Pauli exclusion principles, Hund's multiplicity rule. Electronic configurations of the elements, effective nuclear charge.

II. Periodic Properties  
5 hrs  
Atomic and ionic radii, ionization energy, electron affinity and electronegativity-definition, methods of determination or evaluation, trends in periodic table and applications in predicting and explaining the chemical behaviour.

Unit II  

III. Chemical Bonding  
20 hrs  
(A) Covalent Bond – Valence bond theory and its limitations, directional characteristics of covalent bond, various types of hybridization and shapes of simple inorganic molecules and ions. Valence shall electron pair repulsion (VSEPR) theory to $\text{NH}_3$, $\text{H}_3\text{O}^+$, $\text{SF}_4$, $\text{ClF}_3$, $\text{ICl}_2^-$ and $\text{H}_2\text{O}$. MO theory, homonuclear and heteronuclear (CO and NO) diatomic molecules, multicenter bonding in electron deficient molecules, bond strength and bond energy, percentage ionic character from dipole moment and electronegativity difference.

(B) Ionic Solids – Ionic structures, radius-ratio effect and coordination number, limitation of radius-ratio rule, lattice defects,
semiconductors, lattice energy and Born-Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarisability of ions, Fajan’s rule. Metallic bond-free electron, valence bond and band theories.

(C) Weak Interactions – Hydrogen bonding, vander Waals forces.

**Unit III**

**IV. s-Block Elements**  
6 hrs  
Comparative study, diagonal relationship, salient features of hydrides, solvation and complexation tendencies including their function in biosystems, an introduction to alkyls and aryls.

**V. Environmental Chemistry**  
5 hrs  
Pollution, long distance movement of pollutants, air pollution (CO, CO$_2$, NO$_x$, SO$_2$, H$_2$S, pesticides, ozone layer depletion, smog, acid rain, monitoring and control), water pollution (BOD, COD, sewage treatment, industrial wastewater treatment, reverse osmosis), soil pollution (causes, effects and remedies)

**Unit IV**

**VI. p-Block Elements**  
15 hrs  
Comparative study (including diagonal relationship) of groups 13-17 elements, compounds like hydrides, oxides, oxyacids and halides of group 13-16, hydrides of boron – diborane and higher boranes, borazine, borohydrides, fullerenes, carbides, fluorocarbons, silicates (structural principle), tetrasulphur tetranitride, basic properties of halogens, interhalogens and polyhalides.

**Chemistry of Noble Gases**  
3 hrs  
Chemical properties of the noble gases, chemistry of xenon, structure and bonding in xenon compounds.
B.Sc. (CHEMISTRY)
FIRST YEAR DETAILED SYALLBUS

PAPER 102

Organic Chemistry

60 hrs (2 hrs/week)

Unit I

I. **Structure and Bonding** 5 hrs
Hybridization, bond lengths and bond angles, bond energy, localized and
delocalized chemical bonding, van der Waals interactions, inclusion
compounds, clathrates, charge transfer complexes, resonance,
hyperconjugation, aromaticity, inductive and field effects, hydrogen bonding.

II. **Mechanism of Organic Reactions** 8 hrs
Curved arrow notation, drawing electron movements with arrows,
half-headed and double-headed arrows, homolytic and heterolytic bond
fissions. Types of organic reagents – electrophiles and nucleophiles. Types of

Reactive intermediates – Carbocations, carbanions, free radicals, carbenes,
arynes and nitrenes (with examples). Assigning formal charges on
intermediates and other ionic species.

Methods of determination of reaction mechanism (product analysis,
intermediates, isotope effects, kinetic and stereochemical studies).

III. **Alkanes and Cycloalkanes** 7 hrs
IUPAC nomenclature of branched and unbranched alkanes, the alkyl group,
classification of carbon atoms in alkanes. Isomerism in alkanes, sources
methods of formation (with special reference to Wurtz reaction, Kolbe
reaction, Corey-House reaction and decarboxylation of carboxylic acids),
Physical properties and chemical reactions of alkanes. Mechanism of free
radical halogenation of alkanes: orientation, reactivity and selectivity.

Cycloalkanes – Nomenclature, methods of formation, chemical reactions,
Baeyer's strain theory and its limitations. Ring strain in small rings
(cyclopropane and cyclobutane), theory of strainless rings. The case of cyclopropane ring: banana bonds.

**Unit II**

**IV. Stereochemistry of Organic Compounds 15 hrs**

Concept of isomerism. Types of isomerism.

Optical isomerism – Elements of symmetry, molecular chirality, enantiomers, stereogenic center, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centers, disasteromers, threo and erythro diastereomers, meso compounds, resolution of enantiomers, inversion, retention and recemization. Relative and absolute configuration, sequence rules, D & L and R & S systems of nomenclature.

Geometric isomerism – Determination of configuration of geometric isomers. E & Z system of nomenclature, geometric isomerism in oximes and alicyclic compounds.

**Unit III**

**V. Alkenes, Cycloalkenes, Dienes and Alkynes 7 hrs**

Nomenclature of alkenes, methods of formation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halides, regioselectivity in alcohol dehydration, The Saytzeff rule, Hofmann elimination, physical properties and relative stabilities of alkenes.

Methods of formation, conformation and chemical reactions of cycloalkenes.

Nomenclature and classification of dienes: Isolated, conjugated and cumulated dienes. Structure of allenes and butadiene, methods of formation, polymerization. Chemical reactions – 1,2- and 1,4- additions, Diels Alder reaction.

**Unit IV**

VI. **Arenes and Aromaticity** 8 hrs

Structure of benzene: Molecular formula and Kekule structure.

Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture.

Aromaticity: The Huckle rule, aromatic ions.

Methods of formation and chemical reactions of alkylbenzenes, alkynylbenzenes, biphenyl, naphthalene and anthracene.

VII. **Alkyl and Aryl Halides** 10 hrs

Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms of nucleophilic substitution reactions of alkyl halides, $S_{N2}$ and $S_{N1}$ reactions with energy profile diagrams.
Polyhalogen compounds: Chloroform, carbon tetrachloride.

Methods of formation of aryl halides, nuclear and side chain reactions.

The addition-elimination and the elimination-addition mechanisms of nucleophilic aromatic substitution reactions.

Relative reactivities of alkyl halides vs allyl, vinyl and aryl halides. Synthesis and uses of DDT and BHC.
B.Sc. (CHEMISTRY)

FIRST YEAR DETAILED SYALLBUS

PAPER 103

Physical Chemistry

60 hrs (2 hrs/week)

Unit I

I. Mathematical Concepts and Computers 16 hrs

(A) Mathematical Concepts

Logarithmic relations, curve sketching, linear graphs and calculation of slopes, differentiation of functions like $k_x$, $e^x$, $x^n$, $\sin x$, $\log x$; maxima and minima, partial differentiation and reciprocity relations. Integration of some useful/relevant functions; permutations and combinations. Factorials. Probability.

(B) Computers

General introduction to computers, different components of a computer, hardware and software, input-output devices, binary numbers and arithmetics, introduction to computer languages. Programming. Operating systems.

Unit II

II. Gaseous States 8 hrs

Postulates of kinetic theory of gases, deviation from ideal behavior, van der Waals equation of state.

Critical phenomena: PV isotherms of real gases, continuity of states, the isotherms of van der Waals equation, relationship between critical constants and van der Waals constants, the law of corresponding states, reduced equation of state.
Molecular velocities: Root mean square, average and most probable velocities. Qualitative discussion of the Maxwell's distribution of molecular velocities, collision number, mean free path and collision diameter. Liquification of gases (based on Joule-Thomson effect).

III. Liquid State 6 hrs
Intermolecular forces, structure of liquids (a qualitative description).
Structural differences between solids, liquids and gases.
Liquid crystals: Difference between liquid crystal, solid and liquid. Classification, structure of nematic and cholesteric phases. Thermography and seven segment cell.

Unit III

IV. Solid State 11 hrs
Definition of space lattice, unit cell.
X-ray diffraction by crystals. Derivation of Bragg equation. Determination of crystal structure of NaCl, KCl and CsCl (Laue's method and powder method).

V. Colloidal State 6 hrs
Definition of colloids, classification of colloids.
Solids in liquids (sols): Properties – kinetic, optical and electrical; stability of colloids, protective action, Hardy-Schulze law, gold number.
Liquids in solids (gels): Classification, preparation and properties, inhibition, general application of colloids, colloidal electrolytes.

Unit IV

VI. Chemical Kinetics and Catalysis 13 hrs
Chemical kinetics and its scope, rate of a reaction, factors influencing the rate of a reaction – concentration, temperature, pressure, solvent, light,

Radioactive decay as a first order phenomenon. Experimental methods of chemical kinetics: Conductometric, potentiometric, optical methods, polarimetry and spectrophotometer.

Theories of chemical kinetics: Effect of temperature on rate of reaction, Arrhenius equation, concept of activation energy.

Simple collision theory based on hard sphere model, transition state theory (equilibrium hypothesis). Expression for the rate constant based on equilibrium constant and thermodynamic aspects.

Catalysis - Characteristics of catalysed reactions, classification of catalysis, homogeneous and heterogeneous catalysis, enzyme catalysis, miscellaneous examples.
B.Sc. (CHEMISTRY)

FIRST YEAR DETAILED SYLLABUS

PAPER – 104

PRACTICAL

180 hrs (6 hrs/week)

The duration of practical examination will be of six hours. M M = 50

**Distribution of Marks**

- Inorganic experiments (mixture + titration) 12+8 = 20
- Organic experiments 10 marks
- Physical experiments 10 marks
- Record 5 marks
- Viva 5 marks

**Inorganic Chemistry**

Inorganic mixture analysis (preferably by semimicro method) – The mixture will have six ions, preferably three cations and three anions. It may contain ions of the same group and an interfering anion such as phosphate, oxalate, borate and fluoride. Not more than one interfering anion is to be given. The formal group analysis will be done for the separation and identification of cations of Group I to VI. Two marks will be awarded for each correct ion with proper tests. One mark will be deducted for each incorrect ion reported. Not more than 50 % marks will be awarded if proper tests are not given.

Volumetric analysis: Any four double titrations from acid-base, redox and complexometric types.

**Organic Chemistry**

**Qualitative Organic Analysis**

Detection of extra elements (N, S and halogens) and functional groups (alcoholic, phenolic, aldehydic, ketonic, carbonyl, carboxylic, esters, carbohydrates, amines, amides, nitro and anilide) in simple organic compounds.

**Laboratory Techniques**
**Calibration of thermometer:** 80-82°C (Naphthalene), 113.5-114°C (Acetanilide), 132.5-133°C (Urea), 100°C (Distilled Water).

**Determination of melting point:** Naphthalene 80-82°C, Benzoic acid 121.5-122°C, Urea 132.5-133°C, Succinic acid 184.5-185°C, Cinnamic acid 132.5-133°C, Salicylic acid 157.5-158°C, Acetanilide 113.5-114°C, m-nitrobenzene 90°C, p-ichlorobenzene 52°C, Aspirin 135°C.

**Determination of boiling point:** Ethanol 78°C, Cyclohexane 81.4°C, Toluene 110.6°C, Benzene 80°C.

**Mixed melting point determination:** Urea-Cinnamic acid mixture of various compositions (1:4, 1:1, 4:1).

**Distillation:** Simple distillation of ethanol-water mixture using water condenser. Distillation of nitrobenzene and aniline using air condenser.

**Crystallization:** Concept of induction of crystallization. Phthalic acid from hot water (using fluted filter paper and steamless funnel). Acetanilide from boiling water. Naphthalene from ethanol. Benzoic acid from water.

**Decolorisation and crystallization using charcoal:** Decoloration of brown sugar (sucrose) with animal charcoal using gravity filtration. Crystallization and decolorisation of impure naphthalene (100 g of naphthalene mixes with 0.3 g of Congo Red using 1 g decolorizing carbon) from ethanol.

**Sublimation (simple and vacuum):** Camphor, Naphtalene, Phthalic acid and Succinic acid.

**Physical Chemistry**

**Chemical Kinetics**

1. To determine the specific reaction rate of the hydrolysis of methyl acetate/ethyl acetate catalyzed by hydrogen ions at rooms temperature
2. To study the effect of acid strength on the hydrolysis of an ester
3. To compare the strengths of HCl and H₂SO₄ by studying the kinetics of hydrolysis of ethyl acetate
4. To study kinetically the reaction rate of decomposition of iodide by H₂O₂

**Distribution Law**
1. To study the distribution of iodine between water and CCl₄
2. To study the distribution of benzoic acid between benzene and water

**Colloids**
1. To prepare arsenious sulphide sol and compare the precipitating power of mono-, bi- and trivalent anions

**Viscosity, Surface Tension**
1. To determine the percentage composition of a given mixture (non-interacting systems) by viscosity method
2. To determine the viscosity of amyl alcohol in water at different concentrations and calculate the excess viscosity of these solutions
3. To determine the percentage composition of a given binary mixture by surface tension method (acetone & ethyl-methyl ketone)
B.Sc. (CHEMISTRY)
SECOND YEAR DETAILED SYLLABUS

PAPER 201

Inorganic Chemistry

60 hrs (2 hrs/week)

Unit I
I. Chemistry of Elements of First Transition Series 10 hrs
Characteristic properties of block elements.
Properties of the elements of the first transition series, their binary
compounds (hydrides, carbides and oxides) and complexes with respect to
relative stability of their oxidation states, coordination number and
gometry.

II. Chemistry of Elements of Second and Third Transition Series 10 hrs
General characteristics, comparative treatment with their 3d-analogues with
respect to ionic radii, oxidation states, magnetic behaviour, spectral
properties and stereochemistry. Comparison of Zr/Hf, Nb/Ta and Mo/W.

Unit II
III. Coordination Compounds 10 hrs
Werner's coordination theory and its experimental verification, effective
atomic number concept, chelates, nomenclature of coordination
compounds, isomerism in coordination compounds, valence bond theory of
transition metal complexes.

Unit III
IV. Chemistry of Lanthanide Elements 6 hrs
Electronic structure, oxidation states and ionic radii and lanthanide
contraction, complex formation, occurrence and isolation. Ceric ammonium
sulphate and its analytical uses.

V. Chemistry of Actinides 4 hrs
Electronic configuration, oxidation states and magnetic properties,
chemistry of separation of Np, Pu and Am from U. Similarities between the
later actinides and the later lanthanides.
Unit IV

VI. Oxidation and Reduction 8 hrs
Electrode potential, electrochemical series and its applications. Principles involved in the extraction of the elements.

VII. Acids and Bases 6 hrs
Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concept of acids and bases.

VIII. Non-aqueous Solvents 6 hrs
Physical properties of a solvent, types of solvents and their general characteristics. Reactions in non-aqueous solvents with reference to liquid NH₃ and Liquid SO₂.
**B.Sc. (CHEMISTRY)**

**SECOND YEAR DETAILED SYALLBUS**

**PAPER 202**

**Organic Chemistry**

60 hrs (2 hrs/week)

**Unit I**

I. **Electromagnetic Spectrum: Absorption Spectra**

10 hrs

Ultraviolet (UV) absorption spectroscopy – Absorption laws (Beer-Lambert law), molar absorptivity, presentation and analysis of UV spectra, types of electronic transitions, effect of conjugation. Concept of chromophore and auxochromes. Bathochromic, hypsochromic, hyperchromic and hypochromic shifts. UV spectra of conjugated enes and enones.

Infrared (IR) absorption spectroscopy – Molecular vibrations, Hooke's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, characteristic absorptions of various functional groups and interpretation of IR spectra of simple organic compounds.

**Unit II**

II. **Alcohols**

6 hrs

Classification and nomenclature.

**Dihydric alcohols** – Nomenclature, methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [Pb(OAc)_4 and HIO_4] and pinacol- pinacolone rearrangement.

**Trihydric alcohols** – nomenclature, methods of formation, chemical reactions of glycerol, synthesis of glycerol.
III. Phenols  

Unit III

IV. Ethers and Epoxides  
Nomenclature of ethers and methods of their formation, physical properties. Chemical reactions – cleavage and autoxidation, Ziesel's method.

Synthesis of epoxides. Acid and base-catalyzed ring opening of epoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides.

V. Aldehydes and Ketones  
Nomenclature and structure of the carbonyl groups. Synthesis of aldehydes and ketones with particular reference to the synthesis of aldehydes from acid chlorides, synthesis of aldehydes and ketones using 1,3-dithianes, synthesis of ketones from nitriles and from carboxylic acids. Physical properties.

Unit IV

VI. Carboxylic Acids 6 hrs
Methods of formation and chemical reactions of halo acids. Hydroxy acids: Malic, tartaric and citric acids.
Methods of formation and chemical reactions of unsaturated monocarboxylic acids.
Dicarboxylic acids: Methods of formation and effect of heat and dehydrating agents.

VII. Carboxylic Acid Derivatives 3 hrs
Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anyhydrides.
Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution.
Preparation of carboxylic acid derivatives, chemical reaction. Mechanisms of esterificaton and hydrolysis (acidic and basic).

VIII. Organic Compounds of Nitrogen 12 hrs
Halonitroarenes: Reactivity.
B.Sc. (CHEMISTRY)

SECOND YEAR DETAILED SYALLBUS

PAPER 203

Physical Chemistry

60 hrs (2 hrs/week)

Unit I

I. Thermodynamics – I

Definitions of Thermodynamic Terms

System, surroundings etc. Types of systems, intensive and extensive properties. State and path functions and their differentials. Thermodynamic process. Concept of heat and work.

First Law of Thermodynamics

Thermochemistry

II. Thermodynamics – II

Second Law of Thermodynamics

Concept of Entropy

Entropy as a state function, entropy as a function of V & T, entropy as a function of P & T, entropy change in physical change, Clausius inequality, entropy as a criteria of spontaneity and equilibrium. Entropy change in ideal gases and mixing of gases.

Gibbs and Helmholtz Functions

Gibbs function (G) and Helmholtz function (A) as thermodynamic quantities. A & G as criteria for thermodynamic equilibrium and spontaneity, their advantage over entropy change, Variation of G and A with P, V and T.

Third Law of Thermodynamics

Nernst heat theorem, statement and concept of residual entropy.

Nernst distribution law – Thermodynamic derivation, applications.

Unit II

III. Chemical Equilibrium

Equilibrium constant and free energy. Thermodynamic derivation of law of mass action. Le-Chatelier's principle.

Reaction isotherm and reaction isochore – Clapeyron-Clausius equation and its applications.

IV. Solutions

Partially miscible liquids: Phenol-water, trimethylamine-water, nicotine-water systems, immiscible liquids, steam distillation.

Unit III

V. Electrochemistry – I

Electrical transport: Conduction in metals and in electrolyte solutions, specific conductance molar and equivalent conductance, measurement of equivalent conductance, variation of molar, equivalent and specific conductances with dilution.
Migration of ions and Kohlrausch law, Arrhenius theory of electrolyte dissociation and its limitations. Weak and strong electrolytes. Ostwald's dilution law, its uses and limitations. Debye-Huckel-Onsager equation for strong electrolytes (elementary treatment only). Transport number, definition and determination by Hittorf method and moving boundary method.

Applications of conductivity measurements: Determination of degree of dissociation, determination of $K_a$ of acids, determination of solubility product of a sparingly soluble salt, conductometric titrations.

**Unit IV**

**VI. Electrochemistry – II**  
10 hrs

Types of reversible electrodes – Gas-metal ion, metal-metal ion, metal-insoluble salt-anion and redox electrodes. Electrode reactions, Nernst equation, derivation of cell EMF and single electrode potential, standard hydrogen electrode-reference electrodes and their applications, standard electrode potential, sign conventions, electrochemical series and its significance.

Electrolytic and Galvanic cells–Reversible and irreversible cells, conventional representation of electrochemical cells.

Concentration cell with and without transport, liquid junction potential, application of concentration cells, valency of ions, solubility product and activity coefficient, potentiometric titrations.

Definition of pH and $pK_a$, determination of pH using hydrogen, quinhydrone and glass electrodes by potentiometric methods.

Buffers – Mechanism of buffer action, Henderson-Hazel equation, application of buffer solution. Hydrolysis of salts
VII. **Phase Equilibrium** 5 hrs

Statement and meaning of the terms-phase, component and degree of freedom, derivation of Gibbs phase rule, phase equilibria of one component system—water, CO₂ and S systems.

Phase equilibria of two component systems – Solid - liquid equilibria, simple eutectic – Bi-Cd, Pb-Ag systems, desilverisation of lead.

Solid solutions – Compound formation with congruent melting point (Mg-Zn) and incongruent melting point (FeCl₃-H₂O) and (CuSO₄-H₂O) system.
B.Sc. (CHEMISTRY)

SECOND YEAR DETAILED SYLLABUS

PAPER 204

PRACTICAL

180 hrs (6 hrs/week)

The duration of practical examination will be of six hours.

**Distribution of marks:** Total marks 50 will have inorganic gravimetric of 12 marks, volumetric 8 marks, organic expt 10 marks, physical expt 10 marks, record 5 marks and viva of 5 marks.

**Inorganic Chemistry**

Calibration of fractional weights, pipettes and burettes. Preparation of standards solutions. Dilution – 0.1 M to 0.001 M solutions.

**Quantitative Analysis**

**Volumetric Analysis**

(a) Determination of acetic acid in commercial vinegar using NaOH
(b) Determination of alkali content of antacid tablet using HCl
(c) Estimation of calcium content in chalk as calcium oxalate by permanganometry
(d) Estimation of hardness of water by EDTA
(e) Estimation of ferrous and ferric by dichromate method
(f) Estimation of copper using thiosulphate

**Gravimetric Analysis**

Analysis of Cu as CuSCN, Ni as Ni (dimethylglyoxime) and Ba as BaSO₄
**Organic Chemistry**

**Systematic Qualitative Organic Analysis**

Identification of an organic compound through the functional group analysis, determination of melting point and preparation of suitable derivatives

**Laboratory Techniques**

A. Thin Layer Chromatography

Determination of Rf values and identification of organic compounds:

(a) Separation of green leaf pigments (spinach leaves may be used)

(b) Preparation of separation of 2,4-dinitrophenylhydrazones of acetone, 2-butanone, hexan-2, and 3-one using toluene and light petroleum (40:60)

(c) Separation of a mixture of dyes using cyclohexane and ethyl acetate (8.5:1.5)

B. Paper Chromatography: Ascending and Circular

Determination of Rf values and identification of organic compounds:

(a) Separation of a mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent – ninhydrin.

Physical Chemistry

Transition Temperature

1. Determination of the transition temperature of the given substance by thermometric/dialometric method (e.g. MnCl₂₄H₂O/SrBr₂₂H₂O)

Phase Equilibrium

2. To study the effect of a solute (e.g. NaCl, succinic acid) on the critical solution temperature of two partially miscible liquids (e.g. phenol-water system) and to determine the concentration of that solute in the given phenol-water system
3. To construct the phase diagram of two component (e.g. diphenylamine – benzophenone) system by cooling curve method

Thermochemistry

1. To determine the solubility of benzoic acid at different temperatures and to determine ΔH of the dissolution process
2. To determine the enthalpy of neutralization of a weak acid/weak base versus strong base/strong acid and determine the enthalpy of ionization of the weak acid/weak base
3. To determine the enthalpy of solution of solid calcium chloride and calculate the lattice energy of calcium chloride from its enthalpy data using Born-Haber cycle
B.Sc. (CHEMISTRY)

THIRD YEAR DETAILED SYLLABUS

PAPER 301

Inorganic Chemistry

60 hrs (2 hrs/week)

Unit I

I. Metal-ligand bonding in Transition Metal Complexes 10 hrs
Limitations of valance bond theory, an elementary idea of crystal field theory, crystal field splitting in octahedral, tetrahedral and square planner complexes, factors affecting the crystal-field parameters.

II. Thermodynamic and Kinetic Aspects of Metal Complexes 5 hrs

Unit II

III. Magnetic Properties of Transition Metal Complexes 7 hrs
Types of magnetic behavior, methods of determining magnetic susceptibility, spin-only formula, L-S coupling, correlation of \( \mu \) and \( \mu_{\text{eff}} \) values, orbital contribution to magnetic moments, application of magnetic moment data for 3d-metal complexes.

IV. Electronic spectra of Transition Metal Complexes 7 hrs
Types of electronic transitions, selection rules for d-d transitions, spectroscopic ground states, spectrochemical series, Orgel-energy level diagram for \( d^1 \) and \( d^9 \) states, discussion of the electronic spectrum of \([Ti(H_2O)_6]^{3+}\) complex ion.
Unit III

V. **Organometallic Chemistry** 10 hrs
Definition, nomenclature and classification of organometallic compounds,
Preparation, properties, bonding and applications of alkyls and aryls of Li, Al, Hg, Sn and Ti.
Metal carbonyls: 18-electron rule, preparation, structure and nature of bonding in the mononuclear carbonyls.

VI. **Silicones and Phosphazenes** 4 hrs
Silicones and phosphazenes as examples of inorganic polymers, nature of bonding in triphosphazenes.

Unit IV

VII. **Hard and Soft Acids and Bases (HSAB)** 7 hrs
Classification of acids and bases as hard and soft. Pearson's HSAB concept, acid-base strength and hardness and softness. Symbiosis, theoretical basis of hardness and softness, electronegativity and hardness and softness.

VIII. **Bioinorganic Chemistry** 10 hrs
B.Sc. (CHEMISTRY)

THIRD YEAR DETAILED SYALLBUS

PAPER 302

Organic Chemistry

60 hrs (2 hrs/week)

Unit I

I. Spectroscopy 10 hrs
Nuclear magnetic resonance (NMR) spectroscopy: Proton magnetic resonance (\(^1\text{H} \) NMR) spectroscopy, nuclear shielding and deshielding, chemical shift and molecular structure, spin-spin splitting and coupling constants, areas of signals, interpretation of \(^1\text{H} \) NMR spectra of simple organic molecules such as ethyl bromide, ethanol, acetaldehyde, 1,1,2-tribromoethane, ethyl acetate, toluene and acetophenone.

Problems pertaining to the structures elucidation of simple organic compounds using UV, IR and \(^1\text{H} \) NMR spectroscopic techniques.

Unit II

II. Organometallic Compounds 4 hrs
Organomagnesium compounds: The Grignard reagents—Formation, structure and chemical reactions.

Organozinc compounds: Formation and chemical reactions.

Organolithium compounds: Formation and chemical reactions.

III. Organosulphur Compounds 4 hrs
Nomenclature, structural features, methods of formation and chemical reactions of thiols, thioethers, sulphonic acids, sulphonamides and sulphaguanidine.

IV. Heterocyclic Compounds 8 hrs

Introduction to condensed five and six-membered heterocycles. Preparation and reactions of indole, quinoline and isoquinoline with special reference to Fisher indole synthesis, Skraup synthesis and Bischler-Napieralski synthesis. Mechanism of electrophilic substitution reactions of indole, quinoline and isoquinoline.

Unit III

V. Carbohydrates 8 hrs

Structures of ribose and deoxyribose.

An introduction to disaccharides (maltose, sucrose and lactose) and polysaccharides (starch and cellulose) without involving structure determination.

VI. Amino Acids, Peptides, Proteins and Nucleic Acids 6 hrs

Unit IV

VII. Fats, Oils and Detergents 2 hrs
Natural fats, edible and industrial oils of vegetable origin, common fatty acids, glycerides, hydrogenation of unsaturated oils. Saponification value, iodine value, acid value. Soaps, synthetic detergents, alkyl and aryl sulphonates.

VIII. Synthetic Polymers 4 hrs
Addition or chain-growth polymerization. Free radical vinyl polymerization, ionic vinyl polymerization, Ziegler-Natta polymerization and vinyl polymers.

IX. Synthetic Dyes 8 hrs
Colour and constitution (electronic concept). Classification of dyes. Chemistry and synthesis of Methyl orange, Congo red, Malachite green, Crystal violet, Phenolphthalein, Fluorescein, Alizarin and Indigo.

X. Organic Synthesis via Enolates 6 hrs
Alkylation of 1, 3-dithianes. Alkylation and acylation of enamines.

B.Sc. (CHEMISTRY)
THIRD YEAR DETAILED SYLLABUS

PAPER 303

Physical Chemistry

60 hrs (2 hrs/week)

Unit I

I. Elementary Quantum Mechanics 15 hrs
Black-body radiation, Planck's radiation law, photoelectric effect, heat
capacity of solids, Bohr's model of hydrogen atom (no derivation) and its
defects, Compton effect. de-Broglie hypothesis. Heisenberg uncertainty
principle. Hamiltonian Operator.

Schrödinger wave equation (time dependent and time independent) and its
importance, physical interpretation of the wave function, postulates of
quantum mechanics, particle in a one dimensional box.

Schrödinger wave equation for H-atom, separation into three equations
(without derivation), quantum numbers and their importance, hydrogen like
wave functions, radial wave functions, angular wave functions.

Molecular orbital theory, basic ideas – Criteria for forming MO from AO,
construction of MO by LCAO – H₂⁺ ion, calculation of energy levels from
wave functions, physical picture of bonding and anti-bonding wave
functions, concept of σ, σ*, π, π* orbitals and their characteristics. Hybrid
orbitals – sp, sp², sp³; calculation of coefficients of atomic orbitals used in sp
and sp² hybrid orbitals and interpretation of geometry.

Introduction to valence bond model of H₂, comparison of MO and VB
models.

Unit II

II. Spectroscopy 15 hrs
Introduction: Electromagnetic radiation, regions of the spectrum, basic features of different spectrometers, statement of the Born-Oppenheimer approximation, degrees of freedom.

**Rotational Spectrum**

**Vibrational Spectrum**

**Infrared Spectrum:** Energy levels of simple harmonic oscillator, selection rules, pure vibrational spectrum, intensity, determination of force constant and qualitative relation of force constant and bond energies, effect of anharmonic motion and isotope on the spectrum, idea of vibrational frequencies of different functional groups.

**Raman spectrum:** Concept of polarizability, pure rotational and pure vibrational Raman spectra of diatomic molecules, selection rules.

**Electronic Spectrum**

Concept of potential energy curves for bonding and antibonding molecular orbitals, qualitative description of selection rules and Franck-Condon principle.

Qualitative description of $\sigma$, $\pi$ and $\eta$ MO, their energy levels and the respective transition.

**Unit III**

**III. Physical Properties and Molecular Structure**  
7.5 hrs
Optical activity, polarization – (Clausius-Mossotti equation), orientation of dipoles in an electric field, dipole moment, induced dipole moment, measurement of dipole moment-temperature method and refractivity method, dipole moment and structure of molecules, magnetic properties-paramagnetism, diamagnetism and ferromagnetism, Magnetic susceptibility, its measurements and its importance.

**IV. Photochemistry**  
7.5 hrs
Interaction of radiation with matter, difference between thermal and photochemical processes. Laws of photochemistry: Grothus-Drapper law, Stark-Einstein law, Jablonski diagram depicting various processes occurring in the excited state, qualitative description of fluorescence, phosphorescence, non-radiative processes (internal conversion, intersystem crossing), quantum yield, photosensitized reactions – energy transfer processes (simple examples), kinetics of photochemical reaction.

**Unit IV**

**V. Solutions, Dilute Solutions and Colligative Properties**

Ideal and non-ideal solutions, methods of expressing concentrations of solutions, activity and activity coefficient.

Dilute solution, colligative properties, Raoult's law, relative lowering of vapour pressure, molecular weight determination. Osmosis, law of osmotic pressure and its measurement, determination of molecular weight from osmotic pressure. Elevation of boiling point and depression of freezing point. Thermodynamic derivation of relation between molecular weight and elevation in boiling point and depression in freezing point. Experimental methods for determining various colligative properties.

Abnormal molar mass, van't Hoff factor, colligative properties, degree of dissociation and association of solutes.
B.Sc. (CHEMISTRY)

THIRD YEAR DETAILED SYLLABUS

PAPER 304

PRACTICAL

180 hrs (6 hrs/week)

The duration of practical examination will be of six hours. MM = 50

Distribution of marks: One inorganic experiment of 10 marks, one instrumentation experiment of 10 marks, one organic experiment of 10 marks and one physical experiment of 10 marks will be given in the annual practical examination. 5 marks are for record and 5 marks are for viva.

Inorganic Chemistry

Synthesis and Analysis
(a) Preparation of sodium trioxalatoferrate(III), Na₃[Fe(C₂O₄)₃] and determination of its composition by permanganometry
(b) Preparation of Ni-dmg complex, [Ni(dmg)₂]
(c) Preparation of copper tetrammine complex. [(Cu(NH₃)₄]SO₄
(d) Preparation of cis- and trans-bisoxalatodiaquochromate(III) ion.

Instrumentation

Colorimetry
(a) Job's method (b) Mole-ratio method
(c) Adulteration of food stuffs (d) Effluent analysis, water analysis

Solvent Extraction
Separation and estimation of Mg(II) and Fe(II)

Ion Exchange Method
Separation and estimation of Mg(II) and Zn(II)

Organic Chemistry

Qualitative Analysis
Analysis of an organic mixture containing two solid components using water, NaHCO₃, NaOH for separation and preparation of suitable derivatives
Synthesis of Organic Compounds
(a) Acetylation of salicylic acid, aniline, glucose and hydroquinone.
   Benzoylation of aniline and phenol
(b) Aliphatic electrophilic substitution
   Preparation of iodoform from ethanol and acetone
(c) Aromatic electrophilic substitution
   Nitration
   Preparation of m-dinitrobenzene
   Preparation of p-nitroacetanilide
   Halogenation
   Preparation of p-bromoacetanilide
   Preparation of 2,4,6-tribromophenol
(d) Diazotization/coupling
   Preparation of methyl orange and methyl red
(e) Oxidation
   Preparation of benzoic acid from toluene
(f) Reduction
   Preparation of aniline from nitrobenzene
   Preparation of m-nitroaniline from m-dinitrobenzene

Laboratory Techniques
Steam Distillation
   Naphtalene from its suspension in water
   Clove oil from cloves
   Separation of α- and p-nitrophenols

Column Chromatography
   Separation of fluorescein and methylene blue
   Separation of leaf pigments from spinach leaves
   Resolution of racemic mixture of (+) mandelic acid

Stereo-chemical Study of Organic Compounds via Models
   R and S configuration of optical isomers
   E, Z configuration of geometrical isomers
   Conformational analysis of cyclohexanes and substituted cyclohexanes

Physical Chemistry
Electrochemistry
1. To determine the strength of the given acid conductometrically using standard alkali solution
2. To determine the solubility and solubility product of a sparingly soluble electrolyte conductometrically
3. To study the saponification of ethyl acetate condutometrically.
4. To determine the ionization constant of a weak acid condutometrically.
5. To titrate potentiometrically the given ferrous ammonium sulphate solution using KMnO₄/K₂Cr₂O₇ as titrant and calculate the redox potential of Fe²⁺/Fe³⁺ system on the hydrogen scale

**Refractometry, Polarimetry**
1. To verify law of refraction of mixtures (e.g. of glycerol and water) using Abbe's refractometer
2. To determine the specific rotation of a given optically active compound
3. To determine stoichiometry and stability constant of complexes

**Molecular Weight Determination**
1. Determination of molecular weight of a non-volatile solute by Rast method/ Beckmann freezing point method
2. Determination of the apparent degree of dissociation of an electrolyte (e.g. NaCl) in aqueous solution at different concentrations by ebullioscopy

**Colorimetry**
To verify Beer-Lambert law for KMnO₄/K₂Cr₂O₇ and determine the concentration of the given solution of the substance from absorbance measurement

---

**Books Suggested for Theory Courses**
2. Concise Inorganic Chemistry, J D Lee, ELBS
4. Inorganic Chemistry, D E Shriver, P W Atkins and C H Langford, Oxford
5. Inorganic Chemistry, W W Porterfield Addition, Wesley
6. Inorganic Chemistry, A G Sharpe, ELBS
15. Basic Programming with Application, V K Jain, Tata McGraw Hill
17. University General Chemistry, C N R Rao, Macmillan
18. Physical Chemistry, R A Albery, Wiley Eastern Ltd
19. The Elements of Physical Chemistry, P W Atkins, Oxford
20. Physical Chemistry Through Problems, S K Dogra and S Dogra, Wiley Eastern Ltd

Books Suggested for Practical/Laboratory Courses

1. Vogel’s Qualitative Inorganic Analysis, revised, Svehla, Orient Longman
2. Vogel’s Textbook of Quantitative Inorganic Analysis, revised, J Bassett, R C Denney, G H Jeffery and J Mendham, ELBS
15. Experiments in Physical Chemistry, J C Ghosh, Bharati Bhawan
